## **AMENDMENT TO CLAIMS 1-16**

This listing of claims replaces all prior versions and listings of claims in the application:

## LISTING OF CLAIMS

- 1. (thrice amended) A saccadic-motion detection device comprised of an optical system for focusing light reflected and/or emitted from a subject's eye directly onto an optical navigation chip said optical navigation chip, comprised of a solid state semiconductor whereby the solid state semiconductor contains a photo sensitive imaging array which is eapable of in a first instance configured for recording the focusing light reflected and/or emitted from a subject's eye and for eapable of measuring saccadic eye movement.
- 2. (twice amended) The optical navigation chip in claim 1 <u>directly</u> converts the incident light into digital representations of the movement or position of the eye, or both:
- 3. (twice amended) The <u>saccadic-motion detection device</u> detector of claim 1 <u>ean be</u> is configured to determine the rate of movement of the eye;
- 4. (twice amended) The <u>saccadic-motion detection device detector</u> of claim 1 <u>ean be is</u> configured to determine the angular position, speed, and/or acceleration of the eyes.
- (twice amended) The saccadic-motion detection device detector of claim 4 ean be is
  configured to compare the value of position, speed, and/or acceleration with a table
  associating known or standard conditions to those values determined from the subject's eye;
- 6. (twice amended) The <u>saccadic-motion detection device</u> detector of claim 4, wherein the <u>eendition</u> a <u>condition of the</u> eye can be reported among known conditions for normal or impaired conditions, due to at least one of intoxication, fatigue, dementia, delirium, psychosis, attention deficit, hyperactivity, depression, or mania;
- 7. (twice amended) The <u>saccadic-motion detection device</u> detector of claim 6, wherein the condition of intoxication can be determined that is caused by drugs, such as benzodiazepines, ethanol (alcohol), barbiturates, narcotics, narcotic mixtures, and amphetamines;
- 8. (twice amended) The <u>saccadic-motion detection device</u> detector of claim 1 wherein the optical navigation chip is configured with the capability to provide position or motion information at greater than 1200 times per second;
- (twice amended) The <u>saccadic-motion detection device</u> detector of claim 1, wherein the
  optical navigation chip is configured with the capability to provide position or motion
  information at between about 1200 and about 6000 times per second;

Inventor: Charles Plant, et al

App. No. 10/799,045

Patent Title: Saccadic Motion Sensing

- 10. (thrice amended) The <u>saccadic-motion detection device</u> detector of claim 1, wherein a <u>handheld</u> mechanical frame is attached to the optical <u>system</u> apparatus and the optical navigation chip-so as to be grasped by hand;
- 11. (thrice amended) The <u>saccadic-motion detection device</u> detector of claim 1, wherein a source of light, <u>said source of light being outside the visible spectrum for humans</u>, is attached and configured to the subject's eye so configured to be attached near the subject's eye so that the reflected light is received by the optical <u>system apparatus</u>.
- 12. Cancelled
- 13. (twice amended) The <u>saccadic-motion detection device</u> detector of claim 1, wherein the optical navigation chip contains an array of charge coupled devices (CCDs);.
- 14. (thrice amended) The <u>saccadic-motion detection device</u> detector of claim 1, wherein the <u>subjects are a subject is a creatures</u> capable of saccadic eye motion, which includes humans and other animals.
- 15. (thrice amended) A system for detecting saccadic eye movements comprised of a motion transducer using and an optical apparatus configured to focus light received from a subject's eye directly onto the motion transducer, which then provides at least one direct indication of saccadic eye motion over a discrete interval of time at a discrete point in time and/or motion at different times;
- 16. (previously amended) The system of claim 15 that includes further comprising a light source to illuminate the subject's eye, and a housing for the light source, a motion transducer, and an optical apparatus, and a handheld housing, which can include a hand grip, so that the entire device is readily portable; housing for supporting all components of the system for ready portability.
